

This safety data sheet was created pursuant to the requirements of: Regulation (EC) No. 1907/2006 as amended by Commission Regulation (EU) 2020/878 and Regulation (EC) No. 1272/2008

Issuing Date 06-Oct-2023	Revision Date 06-Oct-2023	Revision Number 1
SECTION 1: Identifica	tion of the substance/mixture and of	the company/undertaking
1.1. Product identifier		
Product Name	Carbon Black (Oxidized)	
REACH registration number	01-2119384822-32-0144	
CAS No	1333-86-4	
Synonyms	BARONX Specialty Products	
Pure substance/mixture	Substance	
Molecular weight	12	
1.2. Relevant identified uses	of the substance or mixture and uses advised ag	ainst
Recommended use	Additive for plastic and rubber; Pigment for applications such as semi conductive comp refractories, etc.	
Uses advised against	Not recommended for use as a human tatto For professional use only	o pigment
1.3. Details of the supplier of	the safety data sheet	
Importer Only Representative: Intertek France Ecoparc II, 27400 Heudebouville, FRANCE REACH contact person: Emilie Savides	<u>Supplier</u> Himadri Speciality Chemical Ltd. 8, India Exchange Place, 2nd Fl Kolkata, WB 700 001 INDIA +91-33 2230 4363 +91-33 2230 9953	
Telephone No.: +33 2 79 23 03 49 Email: if.reach@intertek.com		
For further information, pleas E-mail address	se contact carbonblack@himadri.com	
1.4. Emergency telephone nu	mber	
Emergency telephone	CHEMTREC: +44 20 3885 0382 +1 703 527 3887 (CHEMTREC Internationa	l)
Emorgonov tolophono \$45	(EC)4070/2000	

	272/2008
Europe	112

SECTION 2: Hazards identification

2.1. Classification of the substance or mixture

Classification according to Regulation (EC) No. 1272/2008 [CLP] This substance is classified as not hazardous according to regulation (EC) 1272/2008 [CLP].

2.2. Label elements

Hazard statements

Not classified.

2.3. Other hazards

May form combustible dust concentrations in air.

. Contact with dust can cause mechanical irritation or drying of the skin. Dust contact with the eyes can lead to mechanical irritation. Inhalation of dust in high concentration may cause irritation of respiratory system. Do not expose to temperatures above 400 °C.

This substance does not meet the PBT/vPvB criteria of REACH, annex XIII.

Endocrine Disruptor Information This product does not contain any known or suspected endocrine disruptors.

SECTION 3: Composition/information on ingredients

3.1 Substances

Chemical name	Weight-%	REACH registration number	EC No (EU Index No)	Classification according to Regulation (EC) No. 1272/2008 [CLP]	Specific concentration limit (SCL)	M-Factor	M-Factor (long-term)
Carbon black 1333-86-4	100	01-211938482 2-32	215-609-9	[A]	-	-	-

Additional information

HS Code: 2803.00.00

<u>Classification according to Regulation (EC) No. 1272/2008 [CLP]</u> - Notes [A] - Not classified, Data are conclusive but insufficient for classification

Full text of H- and EUH-phrases: see section 16

Acute Toxicity Estimate

If LD50/LC50 data is not available or does not correspond to the classification category, then the appropriate conversion value from CLP Annex I, Table 3.1.2, is used to calculate the acute toxicity estimate (ATEmix) for classifying a mixture based on its components

Chemical name	Oral LD50 mg/kg	Dermal LD50 mg/kg		Inhalation LC50 - 4 hour - vapour - mg/L	
Carbon black 1333-86-4	> 8000	-	-	-	-

This product does not contain candidate substances of very high concern at a concentration >=0.1% (Regulation (EC) No. 1907/2006 (REACH), Article 59)

Nanoforms

Carbon black (1333-86-4)

Name of (set of) nanoform(s)	Particle characteristics	Value	Method
carbon black, solid, nanoform, no surface treatment	Particle Size distribution - d10	> 6 - < 71 nm	No information available
carbon black, solid, nanoform, no surface treatment	Particle Size distribution - d50	> 7 - < 101 nm	No information available
carbon black, solid, nanoform, no surface treatment	Particle Size distribution - d90	> 21 - > 178 nm	No information available
carbon black, solid, nanoform, no surface treatment	Shape of particles	Spherical; Aspect ratio Up to 3:1	No information available
carbon black, solid, nanoform, no surface treatment	Crystallinity	Amorphous; Not crystalline	No information available
carbon black, solid, nanoform, no surface treatment	Specific surface area	18 - 310 m²/g	BET
carbon black, solid, nanoform, no surface treatment	Level of dustiness	High	DIN-EN 15051-2
carbon black, solid, nanoform, no surface treatment	Surface treatment	None	No information available
carbon black, solid, nanoform, no surface treatment	Agglomeration state	Micron-sized agglomerates	No information available
carbon black, solid, nanoform, no surface treatment	Dissolution Rate	Not soluble	No information available
carbon black, solid, nanoform, no surface treatment	Dispersion stability	Intermediate stability	OECD 318

SECTION 4: First aid measures

4.1. Description of first aid measures

Inhalation	Remove to fresh air. If breathing is difficult, give oxygen. If symptoms persist, call a doctor.			
Eye contact	Rinse immediately with plenty of water, also under the eyelids, for at least 15 minutes. Get medical attention if symptoms occur.			
Skin contact	Wash skin with soap and water. If symptoms persist, call a doctor.			
Ingestion	Do NOT induce vomiting. Rinse mouth thoroughly with water. Never give anything by mouth to an unconscious person.			
4.2. Most important symptoms and	effects, both acute and delayed			
Symptoms	Irritating to the eyes and respiratory tract if exposed above the occupational exposure limits. See Section 11 for additional Toxicological Information.			
Effects of Exposure	See Section 11 for additional Toxicological Information.			
4.3. Indication of any immediate me	edical attention and special treatment needed			
Note to doctors	Treat symptomatically.			

SECTION 5: Firefighting measures

5.1. Extinguishing media	
--------------------------	--

precautions for fire-fighters

Suitable Extinguishing Media	Foam, Dry chemical, Carbon dioxide (CO2), Fog. A fog spray is recommended if water is used.			
Unsuitable extinguishing media	Do not scatter spilled material with high pressure water streams.			
5.2. Special hazards arising from the	ne substance or mixture			
Specific hazards arising from the chemical	Avoid generation of dust. It may not be obvious that carbon black is burning unless the material is stirred and sparks are apparent. Carbon black that has been on fire should be closely observed for at least 48 hours to ensure no smoldering material is present.			
	Burning produces irritant fumes. Product is insoluble and floats on water. If possible, try to contain floating material. Dusts or fumes may form explosive mixtures in air.			
	Dust deposits should not be allowed to accumulate on surfaces, as these may form an explosive mixture if they are released into the atmosphere in sufficient concentration. Avoid dispersal of dust in the air (i.e., clearing dust surfaces with compressed air). Ground and bond all lines and equipment associated with product system. All equipment should be non-sparking and explosion proof. Take precautionary measures against static discharge.			
5.3. Advice for firefighters				
Special protective equipment and	Firefighters should wear self-contained breathing apparatus and full firefighting turnout			

gear. Use personal protection equipment. Material becomes extremely slippery when wet.

SECTION 6: Accidental release measures

6.1. Personal precautions, protective equipment and emergency procedures

Personal precautions	Material becomes extremely slippery when wet. Avoid generation of dust. All equipment used when handling the product must be grounded. Ensure adequate ventilation. In case of insufficient ventilation, wear suitable respiratory equipment. Use personal protective equipment as required. See section 8 for more information.			
For emergency responders	Use personal protection recommended in Section 8.			
6.2. Environmental precautions				
Environmental precautions	Prevent entry into waterways, sewers, basements or confined areas. Prevent further leakage or spillage if safe to do so. Prevent product from entering drains. Do not flush into surface water or sanitary sewer system. Local authorities should be advised if significant spillages cannot be contained. See Section 12 for additional Ecological Information.			
6.3. Methods and material for conta	inment and cleaning up			
Methods for containment	Prevent further leakage or spillage if safe to do so. The product is insoluble and floats on water. Any product that reaches water should be contained.			
Methods for cleaning up	Avoid sweeping spilled dry material. If possible, vacuum using an explosion-proof vacuum and/or cleaning system suitable for combustible dusts. Cleaning system/vacuum equipped with high efficiency particulate air (HEPA) filtration is recommended. Transfer to properly labelled containers. See Section 13 for additional waste treatment information.			

Prevention of secondary hazards Clean contaminated objects and areas thoroughly observing environmental regulations.

6.4. Reference to other sections

Reference to other sections See section 8 for more information See section 13 for more information

SECTION 7: Handling and storage

7.1. Precautions for safe handling

Advice on safe handling Avoid contact with skin and eyes. Avoid generation of dust. Do not breathe dust. Do not use compressed air. Take precautionary measures against static discharges. Use grounding and bonding connection when transferring this material to prevent static discharge, fire or explosion. Fine dust is capable of penetrating electrical equipment and may cause electrical shorts. Safe work practices include the elimination of potential ignition sources in proximity to carbon black dust; good housekeeping to avoid accumulations of dust on all surfaces; appropriate exhaust ventilation design and maintenance to control airborne dust levels to below the applicable occupational exposure limit. If hot work is required, the immediate work area must be cleared of carbon black dust.

General hygiene considerations Contaminated work clothing should not be allowed out of the workplace. Take off all contaminated clothing and wash it before reuse. Wash hands and face before breaks and immediately after handling the product.

7.2. Conditions for safe storage, including any incompatibilities

Storage ConditionsKeep in a dry, cool and well-ventilated place. Store away from heat, ignition sources,
volatile chemicals and strong oxidizers. Do not store together with volatile chemicals as
they may be adsorbed onto the product.

Carbon black is not classifiable as a Division 4.2 self-heating substance under the UN test criteria. However, UN criteria for determining if a substance is self-heating is volume dependent (i.e., the auto-ignition temperature decreases with increasing volume). This classification may not be appropriate for large volume storage container.

Before entering vessels and confined spaces containing carbon black, test for adequate oxygen, flammable gases and potential toxic air contaminants. Do not allow dust to accumulate on surfaces.

7.3. Specific end use(s)

Specific use(s) The identified uses for this product are detailed in Section 1.2.

Exposure scenario

Per Article 14.4 of the REACH Regulation, no exposure scenario has been developed as the substance is not hazardous.

SECTION 8: Exposure controls/personal protection

8.1. Control parameters

Exposure Limits

Chemical name	European Union	Austria	Belgium	Bulgaria	Croatia
Carbon black	-	-	TWA: 3 mg/m ³	-	TWA: 3.5 mg/m ³
1333-86-4					STEL: 7 mg/m ³
Chemical name	Cyprus	Czech Republic	Denmark	Estonia	Finland
Carbon black	-	TWA: 2.0 mg/m ³	TWA: 3.5 mg/m ³	TWA: 3 mg/m ³	TWA: 3.5 mg/m ³
1333-86-4		dust	STEL: 7 mg/m ³	-	STEL: 7 mg/m ³

Other information on limit values NOTE: Unless otherwise indicated as "respirable" or "inhalable", the exposure limit represents a "total" value. The inhalable exposure limit has been demonstrated to be more restrictive than the total exposure limit, by a factor of approximately 3

Biological occupational exposure limits

This product, as supplied, does not contain any hazardous materials with biological limits established by the region specific regulatory bodies.

Derived No Effect Level (DNEL) - Workers

Chemical name	Oral	Dermal	Inhalation
Carbon black	-	-	2 mg/m ³
1333-86-4			inhalable
			0.5 mg/m ³
			respirable

Derived No Effect Level (DNEL) - General Public Not applicable.

8.2. Exposure controlsEngineering controlsUse process enclosures and/or exhaust ventilation to keep airborne dust concentrations
below the occupational exposure limit. Ensure that eyewash stations and safety showers
are close to the workstation location.Personal protective equipmentEye/face protectionWear safety glasses with side shields (or goggles). Eye protection must conform to
standard EN 166.Hand protectionProtective gloves. Barrier creams may help to protect the exposed areas of skin. Gloves
must conform to standard EN 374.

Skin and body protection	Wear suitable protective clothing.
Respiratory protection	Approved air purifying respirator (APR) for particulates may be used where airborne dust concentrations are expected to exceed occupational exposure limits. Use a positive-pressure, air supplied respirator if there is any potential for uncontrolled release, exposure levels are not known, or in circumstances where APRs may not provide adequate protection. When respiratory protection is required to minimize exposures to carbon black, programs should follow the requirements of the appropriate governing body for the country, province or state. Selected references to respiratory protection standards are provided below: EU: CR 529 Guidelines for Selection and Use of Respiratory Protective Devices (CEN). Germany: DIN/EN 143 Respiratory Protective Devices for Dusty Materials. UK: BS 4275 Recommendations for the Selection, Use and Maintenance of Respiratory Protective Equipment.
General hygiene considerations	Contaminated work clothing should not be allowed out of the workplace. Take off all contaminated clothing and wash it before reuse. Wash hands and face before breaks and immediately after handling the product.
Environmental exposure controls	See Section 12 for additional Ecological Information.

SECTION 9: Physical and chemical properties

9.1. Information on basic physical and chemical properties

9.1. Information on basic physical a	and chemical properties	
Appearance	Black powder or pellet	
Physical state	Solid	
Colour	Black	
Odour	Odourless	
Odour threshold	Not applicable	
Property_	<u>Values</u>	Remarks • Method
Melting point / freezing point		Not applicable
Initial boiling point and boiling		Not applicable

SECTION 10: Stability and	reactivity		
10.1. Reactivity	rouotivity		
	••••••••••••••••••••••••••••••••••••••		
Reactivity	May react exothermically upon contact with strong oxidizers.		
10.2. Chemical stability			
Stability	Stable under normal conditions.		
Explosion data Sensitivity to mechanical impac Sensitivity to static discharge	ct None. Yes. Fine dust dispersed in air, in sufficient concentrations, and in the presence of an ignition source is a potential dust explosion hazard.		
10.3. Possibility of hazardous react	tions		
Possibility of hazardous reactions	None under normal processing.		
Hazardous polymerisation	Hazardous polymerisation does not occur.		
10.4. Conditions to avoid			
Conditions to avoid	Temperatures above > 400 °C / > 752 °F. Eliminate sources of ignition. Incompatible materials. Avoid accumulation of airborne dusts.		
10.5. Incompatible materials			
Incompatible materials	Strong oxidising agents.		
10.6. Hazardous decomposition pro	oducts_		
Hazardous decomposition product	s Carbon monoxide, Carbon dioxide (CO2), Sulphur oxides, Organic products of combustion		

Hazardous decomposition products Carbon monoxide. Carbon dioxide (CO2). Sulphur oxides. Organic products of combustion.

SECTION 11: Toxicological information

11.1. Information on hazard classes as defined in Regulation (EC) No 1272/2008

Information on likely routes of exposure

Product Information

Inhalation	Inhalation of dust in high concentration may cause irritation of respiratory system.		
Eye contact	Dust contact with the eyes can lead to mechanical irritation.		
Skin contact	Contact with dust can cause mechanical irritation or drying of the skin.		
Ingestion	No known hazard by swallowing.		
Symptoms related to the physical, chemical and toxicological characteristics			
Symptoms	None known.		
<u>Acute toxicity</u> Numerical measures of toxicity			

Component Information

Chemical name	Oral LD50	Dermal LD50	Inhalation LC50
Carbon black	> 8000 mg/kg (Rat) Equivalent to OECD TG 401	-	-

Delayed and immediate effects as well as chronic effects from short and long-term exposure

Skin corrosion/irritation	Based on available data, the classification criteria are not met.
Component Information	
Carbon black (1333-86-4)	
Method	Equivalent to OECD TG 404
Species	Rabbit
Results	non-irritant; Product score: Erythema: 0, edema: 0

Serious eye damage/eye irritation Based on available data, the classification criteria are not met.

Component Information	
Carbon black (1333-86-4)	
Method	OECD TG 405
Species	Rabbit
Results	non-irritant; Product score: Iris: 0, Chemosis: 0, Cornea: 0, Conjunctivae: 0

Respiratory or skin sensitisation Based on available data, the classification criteria are not met.

Component Information	
Carbon black (1333-86-4)	
Method	OECD TG 406
Species	Guinea pig
Results	Not a skin sensitiser

Germ cell mutagenicity	In vitro: Carbon black is not suitable to be tested directly in bacterial (Ames test) and other in vitro systems because of its insolubility. However, when organic solvent extracts of carbon black have been tested, results showed no mutagenic effects. Organic solvent extracts of carbon black can contain traces of polycyclic aromatic hydrocarbons (PAHs). A study to examine the bioavailability of these PAHs showed that they are very tightly bound to carbon black and are not bioavailable (Borm, 2005).
	In vivo: In an experimental investigation, mutational changes in the hprt gene were reported in alveolar epithelial cells in the rat following inhalation exposure to carbon black (Driscoll, 1997). This observation is considered to be rat-specific and a consequence of "lung overload," which leads to chronic inflammation and release of reactive oxygen species. This is considered to be a secondary genotoxic effect and, thus, carbon black itself would not be considered to be mutagenic.
	Assessment: In vivo mutagenicity in rats occurs by mechanisms secondary to a threshold effect and is a consequence of "lung overload," which leads to chronic inflammation and the release of genotoxic oxygen species. This mechanism is considered to be a secondary genotoxic effect and, thus, carbon black itself would not be considered to be mutagenic.
Carcinogenicity	Animal toxicity:Rat, oral, duration 2 years.Effect: no tumors.Mouse, oral, duration 2 years.Effect: no tumors.Mouse, dermal, duration 18 months.Effect: no skin tumors.Rat, inhalation, duration 2 years.Target organ: lungs.Effect: inflammation, fibrosis, tumors.
	Note: Tumors in the rat lung are considered to be related to "lung overload" rather than to a specific chemical effect of carbon black itself in the lung. These effects in rats have been reported in many studies on other poorly soluble inorganic particles and appear to be rat specific (ILSI, 2000). Tumors have not been observed in other species (i.e., mouse and hamster) for carbon black or other poorly soluble particles under similar circumstances and study conditions.
	<u>Mortality studies (human data):</u> A study on carbon black production workers in the UK (Sorahan, 2001) found an increased risk of lung cancer in two of the five plants studied; however, the increase was not related to the dose of carbon black. Thus, the authors did not consider the increased risk in lung cancer to be due to carbon black exposure. A German study of carbon black workers at one plant (Morfeld, 2006; Buechte, 2006) found a similar increase in lung cancer risk but, like

plant (Morfeld, 2006; Buechte, 2006) found a similar increase in lung cancer risk but, like the Sorahan, 2001 (UK study), found no association with carbon black exposure. A large US study of 18 plants showed a reduction in lung cancer risk in carbon black production workers (Dell, 2006). Based upon these studies, the February 2006 Working Group at the International Agency for Research on Cancer (IARC) concluded that the human evidence for carcinogenicity was inadequate (IARC, 2010).

Since the IARC evaluation of carbon black, Sorahan and Harrington (2007) have re-analyzed the UK study data using an alternative exposure hypothesis and found a positive association with carbon black exposure in two of the five plants. The same exposure hypothesis was applied by Morfeld and McCunney (2009) to the German cohort; in contrast, they found no association between carbon black exposure and lung cancer risk and, thus, no support for the alternative exposure hypothesis used by Sorahan and Harrington. Overall, as a result of these detailed investigations, no causative link between carbon black exposure and cancer risk in humans has been demonstrated.

IARC cancer classification:

In 2006 IARC re-affirmed its 1995 finding that there is "inadequate evidence" from human health studies to assess whether carbon black causes cancer in humans. IARC concluded

that there is "sufficient evidence" in experimental animal studies for the carcinogenicity of carbon black. IARC's overall evaluation is that carbon black is "possibly carcinogenic to humans (Group 2B)". This conclusion was based on IARC's guidelines, which generally require such a classification if one species exhibits carcinogenicity in two or more animal studies (IARC, 2010).

Solvent extracts of carbon black were used in one study of rats in which skin tumors were found after dermal application and several studies of mice in which sarcomas were found following subcutaneous injection. IARC concluded that there was "sufficient evidence" that carbon black extracts can cause cancer in animals (Group 2B).

ACGIH cancer classification:

Confirmed Animal Carcinogen with Unknown Relevance to Humans (Category A3 Carcinogen).

Assessment:

Applying the guidelines of self-classification under the Globally Harmonized System of Classification and Labelling of Chemicals, carbon black is not classified as a carcinogen. Lung tumors are induced in rats as a result of repeated exposure to inert, poorly soluble particles like carbon black and other poorly soluble particles. Rat tumors are a result of a secondary non-genotoxic mechanism associated with the phenomenon of lung overload. This is a species-specific mechanism that has questionable relevance for classification in humans. In support of this opinion, the CLP Guidance for Specific Target Organ Toxicity – Repeated Exposure (STOT-RE), cites lung overload under mechanisms not relevant to humans. Human health studies show that exposure to carbon black does not increase the risk of carcinogenicity.

Reproductive toxicity

<u>Assessment:</u>

No effects on reproductive organs or fetal development have been reported in long-term repeated dose toxicity studies in animals.

STOT - single exposure <u>Assessment:</u>

Based on available data, specific target organ toxicity is not expected after single oral, single inhalation, or single dermal exposure.

STOT - repeated exposure <u>Animal toxicity:</u>

Repeated dose toxicity: Inhalation (rat), 90 days, No Observed Adverse Effect Concentration (NOAEC) = 1.1 mg/m³ (respirable). Target organ/effects at higher doses are lung inflammation, hyperplasia, and fibrosis.

Repeated dose toxicity: oral (mouse), 2 yrs, No Observed Effect Level (NOEL) = 137 mg/kg (body wt.)

Repeated dose toxicity: oral (rat), 2 yrs, NOEL = 52 mg/kg (body wt.) Although carbon black produces pulmonary irritation, cellular proliferation, fibrosis, and lung tumors in the rat under conditions of lung overload, there is evidence to demonstrate that this response is principally a species-specific response that is not relevant to humans.

Morbidity studies (human data):

Results of epidemiological studies of carbon black production workers suggest that cumulative exposure to carbon black may result in small, non-clinical decrements in lung function. A U.S. respiratory morbidity study suggested a 27 ml decline in FEV1 from a 1 mg/m³ 8 hour TWA daily (inhalable fraction) exposure over a 40-year period (Harber, 2003). An earlier European investigation suggested that exposure to 1 mg/m³ (inhalable fraction) of carbon black over a 40-year working lifetime would result in a 48 ml decline in FEV1 (Gardiner, 2001). However, the estimates from both studies were only of borderline statistical significance. Normal age-related decline over a similar period of time would be approximately 1200 ml.

In the U.S. study, 9% of the highest non-smokers exposure group (in contrast to 5% of the unexposed group) reported symptoms consistent with chronic bronchitis. In the European

study, methodological limitations in the administration of the questionnaire limit the conclusions that can be drawn about reported symptoms. This study, however, indicated a link between carbon black and small opacities on chest films, with negligible effects on lung function.

Assessment:

Inhalation: Applying the guidelines of self-classification under GHS, carbon black is <u>not</u> classified under STOT-RE for effects on the lung. Classification is not warranted on the basis of the unique response of rats resulting from "lung overload" following exposure to poorly soluble particles such as carbon black. The pattern of pulmonary effects in the rat, such as inflammation and fibrotic responses, are not observed in other rodent species, non-human primates, or humans under similar exposure conditions. Lung overload does not appear to be relevant for human health. Overall, the epidemiological evidence from well-conducted investigations has shown no causative link between carbon black exposure and the risk of non-malignant respiratory disease in humans. A STOT-RE classification for carbon black after repeated inhalation exposure is not warranted.

Oral: Based on available data, specific target organ toxicity is not expected after repeated oral exposure.

Dermal: Based on available data and the chemical-physical properties (insolubility, low absorption potential), specific target organ toxicity is not expected after repeated dermal exposure.

Aspiration hazard	Assessment:
	Based on industrial experience and the available data, no aspiration hazard is expected.

11.2. Information on other hazards

- 11.2.1. Endocrine disrupting properties
- **Endocrine disrupting properties** This product does not contain any known or suspected endocrine disruptors.
- 11.2.2. Other information

Other adverse effects No information available.

SECTION 12: Ecological information

12.1. Toxicity

Ecotoxicity

Chemical name	Algae/aquatic plants	Fish	Toxicity to	Crustacea
			microorganisms	
Carbon black	EC50: >10,000 mg/L	LC50: >1000mg/L (96h,	EC0: 800 mg/L (3h,	EC50: > 5600 mg/l (24h,

	Method: OECD			
	Guideline 201			

12.2. Persistence and degradability

Persistence and degradability	Insoluble in water. The methods for determining biodegradability are not applicable to
	inorganic substances.

12.3. Bioaccumulative potential			
Bioaccumulation	Not expected because of the physicochemical properties of the substance.		
<u>12.4. Mobility in soil</u>			
Mobility in soil	Insoluble. Not expected to migrate.		
12.5. Results of PBT and vPvB assessment			
PBT and vPvB assessment	This substance is not considered to be persistent, bioaccumulating nor toxic (PBT). This substance is not considered to be very persistent nor very bioaccumulating (vPvB).		
12.6. Endocrine disrupting prope	rtion		
12.6. Endocrine disrupting prope			
Endocrine disrupting properties	This product does not contain any known or suspected endocrine disruptors.		
12.7. Other adverse effects			
Other adverse effects	This substance is not considered to be persistent, bioaccumulating nor toxic (PBT). This substance is not considered to be very persistent nor very bioaccumulating (vPvB).		
SECTION 13: Disposal considerations			
13.1. Waste treatment methods			

Waste from residues/unused products	Dispose of in accordance with local regulations. Dispose of waste in accordance with environmental legislation.
Contaminated packaging	Dispose of contents/containers in accordance with local regulations.
Waste codes / waste designations according to EWC / AVV	According to the European Waste Catalogue, Waste Codes are not product specific, but application specific. Waste codes should be assigned by the user based on the application for which the product was used. EWC: 06 13 03.

SECTION 14: Transport information

Note:		The International Carbon Black Association organized the testing of seven ASTM reference carbon blacks according to the UN method, Self-Heating Solids. All seven reference carbon blacks were found to be "Not a self-heating substance of Division 4.2." The same carbon blacks were tested according to the UN method, Readily Combustible Solids and found to be "Not a readily combustible solid of Division 4.1;" under current UN Recommendations on the Transport of Dangerous Goods. The following organizations do not classify carbon black as a "hazardous cargo" if it is "carbon, non-activated, mineral origin." Himadri Speciality Chemical Ltd's carbon black products meet this definition.
<u>IMD0</u> 14.1 14.2 14.3 14.4	UN number or ID number	Not regulated Not regulated Not regulated Not applicable

SECTION 15: Regulatory information

15.1. Safety, health and environmental regulations/legislation specific for the substance or mixture

National regulations

Germany

Water hazard class (WGK) non-hazardous to water (nwg)

European Union

Take note of Directive 98/24/EC on the protection of the health and safety of workers from the risks related to chemical agents at work.

Authorisations and/or restrictions on use:

This product does not contain substances subject to authorisation (Regulation (EC) No. 1907/2006 (REACH), Annex XIV) This product does not contain substances subject to restriction (Regulation (EC) No. 1907/2006 (REACH), Annex XVII)

Persistent Organic Pollutants

Not applicable

Ozone-depleting substances (ODS) regulation (EC) 1005/2009 Not applicable

International Inventories

Contact supplier for inventory compliance status **TSCA** Active DSL/NDSL Listed on DSL. **EINECS/ELINCS** Listed. RN: 215-609-9. ENCS Listed. IECSC Listed. KECL Listed. PICCS Listed. Listed. AICS Listed NZIoC TCSI Listed.

Legend:

TSCA - United States Toxic Substances Control Act Section 8(b) Inventory

DSL/NDSL - Canadian Domestic Substances List/Non-Domestic Substances List

EINECS/ELINCS - European Inventory of Existing Chemical Substances/European List of Notified Chemical Substances

ENCS - Japan Existing and New Chemical Substances

IECSC - China Inventory of Existing Chemical Substances

KECL - Korean Existing and Evaluated Chemical Substances

PICCS - Philippines Inventory of Chemicals and Chemical Substances

AIIC - Australian Inventory of Industrial Chemicals

NZIOC - New Zealand Inventory of Chemicals

TCSI - Taiwan Chemical Substance Inventory

15.2. Chemical safety assessment

Chemical Safety Report

A Chemical Safety Assessment has been carried out for this substance

SECTION 16: Other information

Key or legend to abbreviations and acronyms used in the safety data sheet

Legend

ATE: Acute Toxicity Estimate SVHC: Substances of Very High Concern for Authorisation: PBT: Persistent, Bioaccumulative, and Toxic (PBT) Substances vPvB: Very Persistent and very Bioaccumulative (vPvB) Substances

Legend	Section 8: Exposure controls/personal protection		
TWA	TWA (time-weighted average)	STEL	STEL (Short Term Exposure Limit)
Ceiling	Maximum limit value	*	Skin designation
SCBA	Self-contained breathing apparatus
